

3.3 22 Sep 2019 There were a few things that could be improved on the UI, the first being that the icons did not 'stick' to the screen. This caused a decent bit of head scratching trying to figure out what each button was. Enterprise editions had it's own unique versions of the button that at times threw me off. Other than that, it looks great. I'm a bit more inclined to update my server at some point next to see what it does than the new 64 bit build. The Ghost forum made the biggest difference in how this one looked over any of the other ones. -true-image-echo-enterprise-server-with-acronis-universal-restore-970826-33-efofarri. Really handy to have backup software that can save images back over the internet in a flash. I chose True Image for my work desktop due to having a large image for a printer, knowing it wouldn't work in Wine. My home desktop has an image that I keep as a backup and have applied to my cloud print server. I had to restart as I thought I was out of space on one of my VM server images. I have run in to no issues thus far on over 100 Windows Server images. It's very easy to use and the results speak for themselves! They both work well and I'm looking forward to my next backup! I am looking for their solution to a few things in the future. 1) Large backups. As this was a test image I kept it small. I would like to be able to keep a session of my home PC's desktop such as seeing documents online at my work PC in the format I keep them with my home PC. My current solution is to keep a bootable drive with all my important software on it and use that to transfer
